AES

Advanced Encryption Standard

AES

- Fixed block size 128 bits
- Key size 128, 192 (AES does not use the 256)
- Rounds 10, 12,14 (depending on key size)
- Operates on 4x4 Matrix Bytes
- Cipher specified as number of repetitions of transformation rounds
  - I/P plain text -> O/P Ciphertext
  - Each round consists of several processing steps

1. SubBytes step
