CWSP Guide to Wireless Security

Wireless LAN Vulnerabilities
QUIZZES

Quick Quiz 1

1. _____ is defined as a method of restricting access to resources.

2. _____ is the science of transforming information so that it is secure while it is being transmitted or stored.

3. An encryption algorithm is known as a(n) _____.

4. The IEEE standard also specifies that the access points and devices can hold up to four shared secret keys, one of which must be designated as the _____.

Quick Quiz 2

1. At regular intervals (normally every 100 ms) the AP sends a(n) _____ frame to announce its presence and to provide the necessary information for other devices that want to join the network.

2. A(n) _____ is a method of determining the keystream by analyzing two packets that were created from the same IV.

3. _____ was developed by the Massachusetts Institute of Technology (MIT) and used to verify the identity of network users.

4. _____ traffic is traffic destined for only one address.

Quiz

1. _____ is defined as a method of restricting access to resources.

2. _____ is the science of transforming information so that it is secure while it is being transmitted or stored.

3. An encryption algorithm is known as a(n) _____.

4. The IEEE standard also specifies that the access points and devices can hold up to four shared secret keys, one of which must be designated as the _____.

Quiz

5. At regular intervals (normally every 100 ms) the AP sends a(n) _____ frame to announce its presence and to provide the necessary information for other devices that want to join the network.

6. A(n) _____ is a method of determining the keystream by analyzing two packets that were created from the same IV.

Quiz

7. _____ was developed by the Massachusetts Institute of Technology (MIT) and used to verify the identity of network users.

8. _____ traffic is traffic destined for only one address.
