Week 1 assignments
Due by end of the week.

1. Explain how an attacker can still capture the SSID over the airwaves even if it is turned off in beaconing frames.

2. Describe the two fundamental characteristics of antennas.

3. What are the three types of antennas? What type(s) are commonly used to detect wireless networks?

4. Explain how WEP violates the cardinal rule of cryptography.

5. Reading: related material in chapters 1, 2, 8
